

**Micro-Fog® Machine Bearing Lubricator  
8 to 32 Bearing Inch Ratings 1/4" Port Size**

- Provides centralized air-borne lubrication for machine bearings, gears, chains, slides, ways, etc
- Controls can be installed to start-up and shut-down the lubricator with the machine
- Delivers a fog of oil to the application points, coating bearing surfaces with a thin oil film and reducing oil consumption
- Air carrying the lubricants passes through the bearing housing, reducing bearing temperature and contamination, providing longer bearing life
- The 2 and 5 U.S. gallon (8 and 20 liter) reservoirs are rated to ASME Pressure Vessel Code, Section VIII
- Refer to Norgren Publication NT-1 for system design, bearing-inch ratings, and reclassifier selection

**Ordering Information.** Models listed have 1/4" PTF threads and are rated from 8 to 32 bearing inches.

### Machine Bearing Lubricators

Machine bearing lubricators deliver a fog of small oil particles through a manifold system to various machine elements (bearings, gears, chains, etc). At the machine elements a nozzle-like fitting, called a reclassifier, causes the small oil particles to combine into larger particles. The larger particles cover the bearing surfaces with a protective film of clean oil. An air line filter and pressure regulator must be installed immediately upstream of the lubricator.

#### How to Select

Selection requires a careful analysis of the lubrication requirements of the machine. After the analysis, the proper lubricator, reservoir, and reclassifiers may be ordered. The following is an abbreviated summary of the steps required to analysis lubrication requirements of the machine. See Norgren Publications NT-1, *Design Manual for Machine Lubrication*, for complete details.

1. Determine the bearing inch requirement.
  - a. List and identify the bearing-inch rating of all machine elements requiring lubrication.
  - b. List the reclassifier ratings required at each point of lubrication.
  - c. Total the reclassifier ratings. This is the bearing-inch requirement to use in selecting the lubricator.
2. Determine reservoir capacity required.
  - a. Calculate rate of oil usage based on bearing-inch rating.
  - b. Determine how often the reservoir can be refilled.
  - c. Select reservoir capacity.

3. Determine the air flow required. See the *Operating Ranges and Air Flow Requirements* chart for air flow requirements of the lubricator.
4. Determine any accessories required.
