Pneu-Turn ${ }^{\circledR}$ rotary actuators are manufactured using corrosive resistant components including 304 stainless steel gear shaft and cylinder bodies, anodized aluminum housing and end caps. Standard models include a self-lubricating sintered iron copper shaft bearing. Optional shaft ball bearings are also available.

## ACTUATOR OPERATION

Rotary action of the Pneu-Turn Rotary Actuator is achieved through the use of a rack and pinion assembly. Just as with a pneumatic or hydraulic cylinder, the speed of rotation may be controlled through the use of flow controls. The action at the end of the rotation can be controlled by the use of adjustable cushions, which are available as an option.

Care should be taken to insure that the inertial force does not exceed the published torque capacity. An external stop may be necessary to avoid exceeding the torque capacity due to inertial loads.

When mounting the Pneu-Turn against the shaft side of the housing, be sure to provide clearance for the pilot diameter to avoid excessive bearing pressure.

For standard models, axial loads must only be applied in the direction indicated on the dimensional drawings. The Dual Shaft or Rear Shaft options can be used to correctly orient tension induced axial loads. With the Ball Bearing option, axial loads can be applied in either direction.

The Angle Adjustment Option will allow $45^{\circ}$ of adjustability. If cushions are ordered in conjunction with the angle adjustment option, adjustability will be $10^{\circ}$.

## PORT POSITIONING

Ports on the Pneu-Turn may be repositioned to accommodate any air line configuration by loosening the three body retainer screws. Once desired port positions are obtained, tighten screws to specified torque values.

## LUBRICATION

The Pneu-Turn Rotary Actuator is pre-lubricated at the factory for extensive, maintenance-free operation. The life of the rotary actuator can be lengthened by providing additional lubrication with an air line mist lubricator or direct introduction of oil to the actuator every 500 hours of operation. Recommended oils for Buna N seals are medium to heavy inhibited hydraulic and general purpose oil. If High Temperature seals, use Dow Corning \#710. Other types of pre-lube are available upon request.

The rack and pinion gear and ball bearings are prelubricated at the factory for extensive, maintenance-free operation. If additional lubrication should be required, use a high grade bearing grease.

## WOODRUFF KEY LOCATION

The standard position of the woodruff key is 12 o'clock at the center of rotation. For Three-Position PneuTurn, the center position is 12 o'clock, $\pm 2^{\circ}$.

## ENGINEERING SPECIFICATIONS

Ratings

| Pressure Rating: | 150 PSI |
| :---: | :---: |
| Rotation Tolerance*: | 9/16" - 3/4" Bore: $0^{\circ}-15^{\circ}$ |
|  | 1-1/16" - $2^{\prime \prime}$ Bore: $0^{\circ}-10^{\circ}$ |
| Temperature Range**: | Buna-N (Standard): $-20^{\circ} \mathrm{F}$ to $200^{\circ} \mathrm{F}$ |
|  | Option V High Temperature Seals: $0^{\circ} \mathrm{F}$ to $400^{\circ} \mathrm{F}$ |
|  | High Temperature Seals with Ball Bearing: $0^{\circ} \mathrm{F}$ to $250^{\circ} \mathrm{F}$ |
| Backlash: | Without X option: $1-1 / 2^{\circ}$ of Arc Maximum. Double rack actuators have zero backlash at end of rotational stroke. |
|  | With X option: Single rack models have zero mid rotational and end of rotation backlash. Double rack models have zero mid-rotational backlash. |
| Breakaway: | <5 PSI |

## ENGINEERING SPECIFICATIONS

## Kinetic Energy Capacity

A load connected to the shaft of a Pneu-Turn will produce kinetic energy as it is rotated. This kinetic energy must be absorbed by the Pneu-Turn or other stopping device. If the Pneu-Turn is to stop the load without external devices, then the application kinetic energy must not exceed the maximums noted in the table below.

## Maximum Allowable Kinetic Energy (in-Ibs)

| SIZE | WITHOUT CUSHIONS | WITH CUSHIONS |
| :---: | :---: | :---: |
| $9 / 16^{\prime \prime}(006 / 014)$ | 0.02 | N/A |
| $3 / 4^{\prime \prime}(017 / 033)$ | 0.04 | 0.08 |
| $1-1 / 16^{\prime \prime}(037 / 074)$ | 0.07 | 0.88 |
| $1-1 / 2^{\prime \prime}(098 / 196)$ | 0.41 | 7.80 |
| 2 " $(247 / 494)$ | 1.60 | 13.00 |

The kinetic energy developed by your application can be determined by using the equations noted below:

$$
\begin{aligned}
& \mathrm{KE}=0.5 * 1 * w 2 \\
& \mathrm{w}=1.20 \text { * ( } \varnothing / \mathrm{t})
\end{aligned}
$$

## LEGEND:

$K E=$ Kinetic energy (in.-lbs.)
$\mathrm{I}=$ Moment of inertia (in.-Ib.-sec.2)
$\mathrm{w}=$ Rotational speed (radians/sec.)
$\varnothing=$ Angle of rotation (radians)
$\mathrm{t}=$ Time of rotation (sec.)
W = Weight of load ( lb .)
$\mathrm{g}=$ Acceleration of gravity (386 in./sec.2)

Below are examples of attachments, their geometry, and the equation to use to determine the Moment of Inertia.

## Double rack overall width calculation:**

PT-196180/045-8C1--Using the chart above, calculate L1 and L2 dimensions as follows:

- L1 = Total rotation (180) * (.0097) Full rotation adder + Largest Degrees stop (135) * (.0097) stop rotation adder + Cushion adder (5.03")
- L2 $=$ Total rotation (180) * (.0097) Full rotation adder + Largest Degrees stop (135) * (.0097) stop rotation adder + Cushion adder (4.44")
- $\left[\mathrm{L} 1=\left(1.746^{\prime \prime}+1.310^{\prime \prime}+5.03^{\prime \prime}\right)=8.086^{\prime \prime}\right]+\left[\mathrm{L} 2=\left(1.746^{\prime \prime}+1.310+4.44 "\right)=7.496 "\right] ;$ Total width $=8.086 "+7.496 "=15.58$ "

## HOW TO SPECIEY

## APPLICATION POSSIBILITIES

Picture the possibilities. Consider the many benefits of using the Bimba Pneu-Turn Rotary Actuator: compact, space-saving design, lightweight, corrosion-resistant components, and low cost. Now, using the pictures on this page as a springboard, you can understand that the applications are limitless. All you need is your imagination and a Bimba Pneu-Turn Rotary Actuator.

## HOW TO ACCESSORIZE

## OPTIONS

MRS ${ }^{\oplus}$ Magnetic Position Sensing
Magnetic pistons are located on the $A$ and $B$ tubes of both the single and double rack rotary actuators, guaranteeing switch operation at any point in the rotation.

## OPTION N

## Low Temperature Seals

Option N (Low Temperature Operation) is now available as a standard catalog offering. Pneu-Turns with seals and lubricant allowing operation to $-40^{\circ} \mathrm{F}$ can now be ordered directly from the catalog. Please note when ordering this option that cylinder performance may be affected beginning at temperatures below $-20^{\circ} \mathrm{F}$.

Operational Note: Dry air with a dew point below the lowest temperature the actuator will experience or dry nitrogen is recommended.

Product Availability: 3 business days

## OPTION Q

## Internal Flow Control

Internal flow control is now available as a standard catalog option in bore sizes $3 / 4^{\prime \prime}, 1-1 / 16$ ", $1-1 / 2^{\prime \prime}$, and $2^{\prime \prime}$; both single and double rack models. Use this option as a space saving feature and to avoid "tampering" associated with externally installed flow controls.

Flow control is achieved using a sealing disk that restricts the flow of air to the port when the piston moves towards the end cap. The restricted air is channeled through a small orifice within the end cap, on its way to the exhaust port. Controlling the flow through this orifice is achieved by adjusting a screw located on the face of the end cap. Single rack units: Clockwise (CW) and counter-clockwise (CCW) rotational flow is controlled using the end cap adjustment screw, opposite the direction of the shaft. Double rack units: CW rotation flow is adjusted using the screw in the lower end cap; CCW rotational flow is adjusted using the screw in the upper end cap. Bore sizes $3 / 4$ " and $1-1 / 16^{\prime \prime}$ provide three turns of adjustment. All larger bore sizes provide four turns of adjustment.

## Option designators:

Q1 - Internal flow control (both sides)
Q2 - Internal flow control (counter-clockwise rotation)
Q3 - Internal flow control (clockwise rotation)
Product Availability: 3 business days

Option Q - Dimensional Variations from Standard (in.)

The model number of Pneu-Turn rotary actuators consists of an alphanumeric cluster designating product type, series, angle of rotation, and other optional components that together make up the complete part number to use in ordering. Use the ordering information below to build a valid part number.

An example of a basic Pneu-Turn unit with $1-1 / 16^{\prime \prime}$ bore, single rack, $90^{\circ}$ angle of rotation, angle adjustment on both sides, dual shaft, and the high temperature option is shown here.

ANGLE OF ROTATION

| 045 | 45 |
| :---: | :---: |
| 090 | 90 |
| 180 | 180 |
| 270 | 270 |
| 360 | 360 |

## PT - 037 090-A1 D V

|  | BORE SIZE |
| :---: | :---: |
| 006 | $9 / 16 "$ bore, single rack |
| 014 | $9 / 16 "$, double rack |
| 017 | $3 / 4 "$ bore, single rack |
| 033 | $3 / 4 "$ bore, double rack |
| 037 | $1-1 / 16 "$ bore, single rack |
| 074 | $1-1 / 16 "$ bore, double rack |
| 098 | $1-1 / 2^{\prime \prime}$ bore, single rack |
| 196 | $1-1 / 2 "$ bore, double rack |
| 247 | $2 "$ bore, single rack |
| 494 | $2 "$ bore, double rack |

NOTES:
${ }^{1}$ Not available in Series 006 or 014. See below for option combination availability. See page XX and XX for explanation of clockwise/counter-clockwise. ${ }^{2}$ When ordering option F, option R must be ordered. Option R will include dowel pin holes. Dowel pin hole locations shown in Related Products section of this catalog.
${ }^{3} 006$ and 014 have flat shaft.
${ }^{4}$ Option $M$ can be ordered with option V, but option V's rating will change to $180^{\circ} \mathrm{F}$.
${ }^{5}$ Low temperature bumpers not available.
${ }^{6} 3 / 4^{\prime \prime}, 1-1 / 16^{\prime \prime}, 1-1 / 2^{\prime \prime}, 2^{\prime \prime}$ bore only.
${ }^{7}$ Oil service applications require 40 psi at all times or leakage will occur. 1/8 NPT ports provided (orifice omitted) for $9 / 16^{\prime \prime}$ and $3 / 4^{\prime \prime}$ bores. For double rack models, oil service seals and $1 / 8^{\prime \prime}$ ports provided on bodies $A$ and $C$ only.
${ }^{8}$ Option T must be ordered in conjunction with Option M. Option M can be ordered with Option V, but Option V's rating will change to $180^{\circ}$ F. See Switch Products section of this catalog for additional switch information.
${ }^{9}$ Option X (Anti-backlash) is available in bore sizes 1-1/16", 1-1/2" and $2^{\prime \prime}$, single and double rack up to $360^{\circ}$ rotation. This option eliminates mid-rotational and end of rotation backlash in single rack models. It also eliminates mid-rotational backlash in double rack models. Double rack models do not have end of rotation backlash. All Pneu-Turns with this option include ball bearings Option R. Use this option to provide smooth rotation along with rotational precision.
${ }^{10} Z 2$ and $Z 3$ options cannot be ordered together. If spring return on both sides is desired, contact Technical Support and request a special. $\mathrm{Z2}$ may be combined with A2 or B2. Z3 may be combined with A3 or B3.

| OPTIONS |  |
| :---: | :---: |
| A1 | Angle adjustment (both sides) |
| A2 | Angle adjustment (counter-clockwise rotation) |
| A3 | Angle adjustment (clockwise rotation) |
| B1 | Bumpers (both sides) |
| B2 | Bumper (counter-clockwise rotation) |
| B3 | Bumper (clockwise rotation) |
| C1 | Cushions (both sides) ${ }^{1}$ |
| C2 | Cushion (counter-clockwise rotation) ${ }^{1}$ |
| C3 | Cushion (clockwise rotation) ${ }^{1}$ |
| D | Dual shaft |
| E | Rear shaft (front portion of dual shaft removed to accommodate hanging axial load) |
| F | Hardened shaft ${ }^{2}$ |
| G | Polymer grease |
| K | Square key ${ }^{3}$ |
| M | Magnetic position sensing ${ }^{4}$ |
| N | Low temperature option ( $\left.-40^{\circ} \mathrm{F}\right)^{5}$ |
| Q1 | Internal flow control (both sides) ${ }^{6}$ |
| Q2 | Internal flow control (counter-clockwise rotation only) ${ }^{6}$ |
| Q3 | Internal flow control (clockwise rotation only) ${ }^{6}$ |
| R | Ball bearing ${ }^{2}$ |
| S | Seals - oil serivce ${ }^{7}$ |
| T | Switch track ${ }^{8}$ |
| V | High temperature option ( $0^{\circ} \mathrm{F}$ to $400^{\circ} \mathrm{F}$ ) |
| X | Anti-backlash (for 1-1/16" to 2" bores only) ${ }^{9}$ |
| Z2 ${ }^{10}$ | Spring return, side A single rack, bodies A and D double rack |
| Z3 ${ }^{10}$ | Spring return, side B single rack, bodies C and B double rack |

The model number of Three Position Pneu-Turn rotary actuators consists of an alphanumeric cluster designating product type, bore size, total rotation, degrees to mid-position, position of the shaft key at the mid-rotational position, and other optional components that together make up the complete part number to use in ordering. Use the ordering information below to build a valid part number.

An example of a basic Three Position Pneu-Turn unit with 1-1/2" bore, single rack, $225^{\circ}$ angle of rotation, $45^{\circ}$ rotation to middle position, key located at mid-position 8, and angle adjustment on both sides is shown here.

NOTES:
${ }^{1}$ Not available in Series 006 or 014. See below for option combination availability. See page XX and XX for explanation of clockwise/counter-clockwise.
${ }^{2}$ When ordering option F, option R must be ordered. Option R will include dowel pin holes. Dowel pin hole locations shown in Related Products section of this catalog.
${ }^{3} 006$ and 014 have flat shaft.
${ }^{4}$ Option M can be ordered with option V, but option V's rating will change to $180^{\circ} \mathrm{F}$.
${ }^{5}$ Low temperature bumpers not available.
${ }^{6} 3 / 4^{\prime \prime}, 1-1 / 16^{\prime \prime}, 1-1 / 2^{\prime \prime}, 2^{\prime \prime}$ bore only.
${ }^{7}$ Oil service applications require 40 psi at all times or leakage will occur. $1 / 8$ NPT ports provided (orifice omitted) for $9 / 16$ " and $3 / 4$ " bores. For double rack models, oil service seals and $1 / 8^{\prime \prime}$ ports provided on bodies $A$ and $C$ only.
${ }^{8}$ Option X (Anti-backlash) is available in bore sizes $1-1 / 16^{\prime \prime}, 1-1 / 2^{\prime \prime}$ and $2 "$, single and double rack up to $360^{\circ}$ rotation. This option eliminates mid-rotational and end of rotation backlash in single rack models. It also eliminates mid-rotational backlash in double rack models. Double rack models do not have end of rotation backlash. All Pneu-Turns with this option include ball bearings Option R. Use this option to provide smooth rotation along with rotational precision.
${ }^{9} Z 2$ and $Z 3$ options cannot be ordered together. If spring return on both sides is desired, contact Technical Support and request a special. Z2 may be combined with A2 or B2. Z3 may be combined with $A 3$ or $B 3$.

## OPTION COMBINATION AVAILABILITY

Due to design or compatibility restrictions, the following options may not be ordered in combination. For example, $F$ and $E$ options are not available in combination.

|  | OPTIONS |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| SERIES | A | B | C | D | E | F | N | Q | R* | S | X | Z |
| 9/16" (006) | S | S | N/A | E | D, F,R,X | D,E,K | B,G,M,V | N/A | E | A,B |  | B,C |
| 9/16" (014) |  | S | N/A | E | D,F,R,X | D,E,K | B,G,M,V | N/A | E | B |  | B,C |
| 3/4" (017) | S | C,S | B, Q, S | E | D,F,R,X | D,E,K | B,G,M, Q, V | A,C,N,S | E | A,B,C |  | B,C |
| 3/4" (033) |  | C, S | B, Q, S | E | D, F,R,X | D,E,K | B,G,M, Q, V | A,C,N,S | E | B,C |  | B,C |
| 1-1/16" (037) |  | C,S | B, Q, S | E | D,F,R,X | D,E,K,X | B,G,M, Q, V | A,C,N, S | E | B,C | E,F | B,C |
| 1-1/16" (074) |  | C,S | B, Q, S | E | D, F,R,X | D,E,K, X | B,G,M, Q, V | A,C,N,S | E | B,C | E,F | B, C |
| 1-1/2" (098) |  | C,S | B, Q, S | E | D,F,R,X | D,E,K,X | B,G,M,Q,V | A,C,N,S | E | B,C | E,F | B,C |
| 1-1/2" (196) |  | C,S | B, Q, S | E | D, F,R,X | D,E,K,X | $B, G, M, Q, V$ | A,C,N,S | E | B,C | E,F | B,C |
| $2{ }^{\prime \prime}$ (247) |  | C,S | B, Q, S | E | D,F,R,X | D,E,K, X | B,G,M, Q, V | A,C,N,S | E | B,C | E,F | B,C |
| 2" (494) |  | C, S | B, Q, S | E | D,F,R,X | D,E,K, X | $B, G, M, Q, V$ | A,C,N,S | E | B,C | E,F | B,C |

* Temperature range of ball bearing option with high temperature option is $0^{\circ} \mathrm{F}$ to $+250^{\circ} \mathrm{F}$.

Option T - "Switch track" should only be ordered with options M or V if the actuator will be operated between $-20^{\circ}$ to $85^{\circ}$

## OPTION COMBINATION AVAILABILITY (THREE POSITION MODELS)

This chart provides the options that cannot be combined due to design or compatibility restrictions. For example,
$F$ and $E$ options are not available in combination.

|  | OPTION |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## HOW TO ORDER REPAIR KITS

EXAMPLE: Customer needs to replace the upper piston/rack assembly on a PT-033-180-C1DM. Order is placed as:

$$
\frac{P T-6}{A}-\frac{33}{B}-\frac{180}{C}-\frac{C 1}{D}-\frac{C D}{E}
$$

## A. Repair Kit Part Number

B. Series code - (Bore Size)

| ENGLISH | METRIC |  |
| :---: | :---: | :---: |
| **006 $=06$ | **011 $=11$ |  |
| $014=14$ | 022 $=22$ |  |
| **017 $=17$ | **027 $=27$ | * Designates parts common to both Single and Double Rack Models. |
| $033=33$ | $054=54$ | Use SINGLE Rack series code only. |
| **037 $=37$ | **060 = 60 | **Single Rack Model. |
| $074=74$ | 121 = 12 | \# Used on 3/4 inch Bore with Ball Bearing Option. |
| **098 = 98 | ${ }^{* *} 161=16$ |  |
| $196=19$ | $321=32$ |  |
| **247 $=24$ | **404 40 |  |
| $494=49$ | $808=80$ |  |

C. Rotation - Rotation is only needed in PT-6 and PT-13
D. Options - See Chart Below. Reference OPTION COMBINATION AVAILABILITY CHART in catalog for option compatibility. Options A, B and C must designate a 1, 2, or 3 (e.g. A1, B1, C1).
E. Location - For Bodies \& Racks on Double Rack Models (PT-6, AB or CD) or (PT-13, A, B, C, or D). For Bodies on Single Rack Models (PT-13, A or B).

| PART NO. | PART DESCRIPTION | OPTIONS | LOCATION |
| :---: | :---: | :---: | :---: |
| *PT-1 | ACTUATOR BODY | only possible option needed R |  |
| *PT-2 | SHAFT/PINION ASSEMBLY | only possible options needed D, E, F, K, R |  |
| *PT-3 | FRONT SHAFT BEARING | only possible option needed R |  |
| *PT-4 | REAR SHAFT BEARING | only possible option needed R |  |
| *PT-5 | SHAFT KEY | only possible option needed K |  |
| *PT-6 | PISTON/RACK ASSEMBLY | only possible options needed B, C, M, S, X | $A B$ or CD |
| *PT-7 | RACK SUPPORT | only possible option needed X |  |
| *PT-8 | PISTON SEAL | only possible options needed S, V |  |
| *PT-9 | PISTON WEAR RING | no options |  |
| *PT-10 | MAGNET | no options |  |
| *PT-11 | BUMPER | only possible options needed V |  |
| *PT-12 | BEARING RETAINER SET SCREW | no options |  |

${ }^{1}$ Double Rack Models require two repair kits per rotary actuator. Oil Service Option: Single Rack models require four oil service seals or two oil service seal kits. Double Rack models require four oil service seals and two standard seals or two oil service seal kits and one standard seal kit.
${ }^{2}$ Used on 3/4" bore single and doubl rack units with Ball Bearing option.
${ }^{3} 2$ " bore requires 8 or 16 .

## REPAIR KITS

| BEARING KIT (K-A-PT)4 |  |  | SHAFT KIT (K-S-PT) |  |  | SEAL KIT (K-L-PT) ${ }^{1}$ |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| PT-3 | Front Shaft Bearing | 1 | PT-2 | Shaft/Pinion Assembly | 1 | PT-8 | Piston Seals | 2 |
| PT-4 | Rear Shaft Bearing | 1 | PT-5 | Shaft Key | 1 |  |  |  |

${ }^{4}$ Bearing Kit for Ball Bearings includes retaining rings and shim package.

[^0]:    Bumper option allows compression under pressure which may exceed tolerance. If higher accuracy desired, please specify angle adjustment.

    * If cylinders are operated at temperatures below $0^{\circ}$ for extended time periods, special modifications may be required. Special seal materials are available on request.

[^1]:    Refer to pages $X X-X X$ for other standard option dimensional information.
